

The Islington Catchment Flood Risk Management Scheme is being undertaken by King's Lynn Drainage Board, with consultants Royal HaskoningDHV and contractors Balfour Beatty.

The Project

A changing climate and the age of the existing Islington Pumping Station means replacement is required to ensure future flood risk is minimised.

The design for the new pumping station has evolved over the last year. Once built, the new Islington Pumping Station will provide better protection to approximately 1,500 homes and 500 businesses.

The project is now moving into the Design and Build phase and enabling works have already commenced. Construction is due to begin later this year.

Public Drop-In

We will be providing an opportunity for the public to view information and ask questions about the project such as background, design drawings, construction traffic routes and estimated programme of works.

There will be representatives from the project team on hand throughout the day to answer and queries or concerns.

Thursday 24th April

Wiggenhall St Germans Memorial Hall

9am - 3pm

Arrive at your convenience throughout the day.

If you are unable to attend but have any queries please contact Lizzie Forbes, Project Communications Manager on lizzie.forbes@balfourbeatty.com or 07540 336 917

New Islington Pumping Station design at 100% Outline Design (Dec 2018)
