

Development Control and Regulation Information for Developers

A copy of the WMA's Planning and Byelaw Strategy, adopted by each member Board, is available below and will likely prove useful for Developers undertaking works within the Internal Drainage District (IDD). This document has been compiled to communicate the way in which the WMA Member Boards undertake their flood risk and water management functions and to consolidate and highlight the IDB policy framework that supports the delivery of this work.

Riparian Landownership within a WMA Board's Internal Drainage District

If you are a Developer proposing works within the Internal Drainage District of a WMA Member Board then please be aware that that Board's Byelaws apply. All WMA Boards have Byelaws. Detailed maps for each District can be found below, alongside each Board's Byelaws.

Adopted Watercourses

The maps linked above also show which watercourses are designated as Adopted Watercourses by each Board. The adoption of a watercourse is an acknowledgement by the Board that the watercourse is of arterial importance to the Internal Drainage District and as such will normally receive maintenance from the IDB. This maintenance is not necessarily carried out on an annual basis but on a recurrence deemed necessary to meet water level management requirements. Please be aware that the designations are made under permissive powers (meaning there is no obligation for IDBs to fulfil any formal maintenance requirement and there is no change in the ownership or liability associated with the watercourse).

Byelaw Advice

We advise all developers undertaking works within an Internal Drainage District to familiarise themselves with the Byelaws of the relevant Board. Specifically, however please be aware of the following:

- Byelaw 10 restricts works within 9 metres of drainage or flood risk infrastructure (including adopted watercourses). The principle aim of this byelaw is to ensure watercourses can be maintained by the Board now and in the future without restrictions being placed on access, and to ensure operatives are aware of third party structures when undertaking maintenance. Byelaw 10 can be relaxed in some circumstances by applying for Land Drainage Consent.
- Byelaw 3 controls the introduction of water (flow or volume) to the Internal Drainage District. If a surface water (or treated foul water) discharge is proposed to a watercourse within an IDD

Development Control and Regulation Information for Developers

(either directly or indirectly), then the proposed development will require a land drainage consent in line with that Internal Drainage Board's byelaws (specifically byelaw 3). Any consent granted will likely be conditional, pending the payment a surface water development contribution fee, calculated in line with the Board's charging policy.

- Regardless of whether a watercourse is within an Internal Drainage District (IDD) if the proposals include works to alter a watercourse (including culverting for access) consent is required under Section 23 of the Land Drainage Act 1991. If the site is within an IDD the relevant IDB is the consenting authority for these works. If outside an IDD, the County Council (Lead Local Flood Authority) is the consenting authority.
- If you are proposed to manage surface water by infiltration, this should be supported by infiltration testing in line with BRE 365.
- For the maintenance of SuDS infrastructure each Board may consider adopting certain assets within their IDD. If you wish to explore this option please contact planning@wlma.org.uk.

Land Drainage Consent

If you are proposing works which require prior written consent from the Board under the terms of the Byelaws or the Land Drainage Act 1991 then please fill in the Application Form available below.

If you are unsure if your proposals require consent from the Board please read the pages linked above or alternatively contact the team via planning@wlma.org.uk.
